

Northwind Robotics - pre-seed deck

We build warehouse pick-and-place arms for mid-size 3PLs.

Traction: 2 paid pilots signed - Kesko Logistics (Mar 2026) and Bertelsmann Fulfilment (May 2026). First pilot came from a cold email after we published our grasp-planning benchmark.

ICP: 3PL operators, 200-800 staff, VP of Operations is the buyer, trigger is a peak-season labour shortfall; today they use agency temps.

Competitors: Dexterity and RightHand. We lose deals to RightHand when the customer already runs Zebra WMS; their integration is turnkey and ours needs a two-week connector build. What breaks in production for Dexterity is bin-clutter recovery - they stall on entangled SKUs.

Team: two founders, both ex-KUKA controls engineers.
